About the NeuroTechnology Program
Audio Visual Entrainment (AVE) & EEG Neurofeedback**

...his behavior has shown much improvement... ---Mrs. Worden/Teacher

....student is able to focus more on academics and less time focused on toys/trinkets....His coordination is improving...for the most part I am seeing less tears & more cooperation....

...He is able to stay on task for a longer period of time & seems less impulsive. He is doing a better job on daily assignments and tasks due to being more focused.

...He has an increased appetite...more assertive...doesn't fall asleep as often as he used to....seems more attentive at times. --- Mrs. Darco/Teacher

Parent Comments,,,,,,,,,

....Listens better, Concentrates, Avid Reader
....not as restless and hyper...seems to be able to sit down & relax
....understands things better... doing better at everything
.... doesn't swing his feet at the table
....really improved on social skills
....thank you for working with him....It has been helpful.

Teacher Comments

....I believe it has been very beneficial especially in the area of listening skills.
....her ability to attend to daily work has improved
....he is able to relax when I tell him to
....she has become a harder worker in my classroom. She has done well with just remembering to go..It seems like the schedule portion has made her more in tuned to what is going on in the world around her.
....He was a behavior student last year. This year we started with NeuroTechnology....He is no longer a behavior student.
....I think it has made a big difference in his behavior and academics this year. I believe it is one of the reasons why he felt some success this year
...NeuroTechnology makes such a difference...He enters the classroom calmly after a session and seems more focused.
....he seems to attend to a task for a longer amount of time...
....I believe it has helped him to become more self motivated
....daily work has improved significantly ...He is reading a lot of AR books this quarter....more than he ever has..He remains on task throughout the class period.
....has improved academically in the past year....he is now completing subject matter in almost the same amount of time as the rest of the class...
....He has been enjoying his success. He is working harder, focusing better, and preparing himself better for class. He still has some work to do, but is improving daily....
....He has really improved on his social skills...He has been quite a bit better with his behavior...

....His progress has been slow, but continues to improve. He is on task more often and doesn't have to be reminded as often in transition times. He has also built some confidence, so he is taking more risks in class. Overall, the program has helped considerably with concentration and on taskness...

....He has had improvements. I don't see the nervous habits like chewing on pencils or banging on them. He has stopped picking erasers apart and things of that nature.

....AVE was a very necessary component to his learning this year, without it learning would have been hard for him. He is very nervous without the program.....

My son's teachers complained that he was not paying attention and could not sit still throughout his early years in school. He is a smart boy, but sometimes it was hard to keep him on task. They suggested I have him diagnosed for Attention Deficit Disorder. My sister had heard about this program so I decided to try it before I tried medication. I am very glad I did.

The light and sound program and the computer games did train him so that he was able to sit still in the class. His teacher who had complained in the fall said in the spring, "I don't know why I brought it up. He fits in the class just fine." It was pretty amazing how we could see that change in his brain waves and the change in behavior. He also has Tourette syndrome. The ticks went away. medication would have made the ticks worse. Unfortunately, I think he needs the Neurotechnology ongoing to maintain the great effects of the training.

It is unfortunate it is not available through our health care system. It was expensive and if I had not been a stay at home mom, it would have been too big of a commitment. It needs to be more accessible and promoted as an alternative to medication. Ritalin is contra indicated for Attention Deficit Disorder when ticks are involved. I had my doubts when I saw the equipment, but with the disappearance of the ticks and the teachers' reports of no problems for the next two years, I am a believer. More work needs to be done in this field! Please Support It!

Parent Comments.....

....she is concentrating more when she reads....slower reading...a little more in comprehension...

....He has taken more interest in writing

....more positive attitude all around. He has a much better self esteem.

...,.He is in a better mood.

....He has done better at school & seems to get out of his anger mood easier.

...attention span is better

...He seems to have matured a great deal

...This program seemed to have helped in a lot of ways. He did much better in school and had many good things to say himself about his feelings and experiences with the program. He still has to work at his pace, but seemed to get more out of things while he was there. Thanks for giving him the opportunity to do this.

Students Comments.....

...I can sleep better

...I have been more focused

...I work faster

...I am calmer than before

...more alert

...I don't look around the room now

...he was more relaxed, and had better concentration & attention in the classroom. -- Joan/Teacher

...I have noticed a change since he started the program. It is most noticeable on the days that he does not have AVE. On those days h is very hyper, blurts out answers, and talks nonstop. When he comes back to class after AVE he is much calmer and I think he has a nice start to his day.the days that he has AVE he is more in control & can focus for a longer period of time than on day he doesn't have AVE. -- Kathryn/Teacher

....she has benefited from both programs (Boost Up & AVE). She has shown improvement in concentration, listening skills, and I feel that she even gained organization skills because she learned to focus and think before acting. She should defiantly continue in the AVE program next year. -- Sue/Teacher

...I have noticed that she has less anxiety since the beginning of the year. She has also sown growth in various areas. She has improved her work completion habits, gained confidence in her abilities, and even help her peers with their incomplete work. She seem able to spend more time on the lessons & less time with being concerned with the things around her. She is able to resolve conflicts without teacher intervention now also. I have seen an overall improvement in her skills and maturity level. -- Mae/Teacher

.... I have noticed that he is more patient, is able to sit still for longer periods of time and his attention span has increased in class. He has shown increases in academic areas as well. He has improved by turning in homework on time & his reading ability has improved. He takes AVE during his outside break time. When he comes back from the sessions he is in more control, is more focused on his schoolwork & males appropriate decisions. -- Joan/Teacher

...I believe the AVE program has been beneficial for my daughter. I have seen an improvement with her anxiety, and she has done a complete turn around in math. She went from hating math, but being able to do it, to actually enjoying it. It seems more natural to her. She has practically outgrown her asthma,

using her inhaler has decreased dramatically....Overall, I have been very happy with the program. -- Lisa/Mother
